Aprašymas:

As a Infrastructure Engineer, you will be responsible for working collaboratively with SpectroCoin software engineering teams: to deploy and operate systems; help out to automate and streamline operations as well as processes; build and maintain tools for deployment, monitoring and operations; troubleshoot and resolve issues in development; test a production environments.

Responsibilities:

- Ensure successful deployments in development, test and production platforms

- Minimize the failure rate of new releases

- Ensure that servers, virtual machines, and working tools are running stable

- Develop and maintain a secure local infrastructure

- Optimize and automate time-consuming tasks.

Requirements

- Linux system administration - managing packages and configuration, troubleshooting, scripting

- Container technologies; Docker

- Experience with metrics, monitoring, alerting, and logging systems

- Knowledge and experience in Disaster Recovery strategies

- Working with highly available, scalable and distributed systems; micro services

- Experience with automation/configuration management using Ansible, bash or an equivalent (puppet, chef is a plus)

- Ability to use a wide variety of open source technologies and cloud services

- Experience with PostgreSQL and MySQL

- Networking; underlay/overlay networks, VPN, subnets

- Understanding of build servers

- Innovative ideas on how to improve cross-functionality

- A working understanding of code and scripts

Company offers

- Flexible working hours

- Competitive salary

- Exciting and challenging FinTech based projects

- Modern offices

- Professional and personal development

- Office perks and company events

- International and talented team

- Employee referral program

Confidentiality guaranteed. Only selected candidates will be informed.
