Description:

Danske Bank Group IT Lithuania (DGITL) is a part of an organization, which delivers world-class digital financial solutions to customers. DGITL is newly established IT site operating from the end of 2014 but it is already the fastest growing IT organization in Lithuanian market. We have an understanding that the current change is Technology-driven, and we prioritize IT as a key component for success in our journey to drive digital disruption in the bank. DGITL teams work with complex tech challenges and develop Danske Bank's global competitive edge on innovative digital solutions. Teams are driven by job content, share ownership of strategic services, own service strategy and lead improvement. One more important feature – senior leadership is present on site.

About the position

You will become part of the Digital Sales and Customer Advice IT team in Daily Banking, where your role will be to design, build, and deploy for high performance, reliability and scalability. You will understand how the

Responsibilities:

- Deliver a well-designed, optimized and scalable solutions, covered by automated unit tests,
- Ensure that architectural choices are based on the best practice and lives up to agility required to continue being the best in class, Take full responsibility of solutions (from analysis, planning and design to development, testing and maintainability),
- Influence team thinking based on experiences with new technologies,
- Collaborate closely with the IT team's architects, engineers, and business analysts
- Collaborate with product and design teams consisting of subcontractors and business people,
- Help other engineers,
- Work in an international/multicultural team

Requirements:

- At least 3 years working experience,
- University degree, e.g. in Computer Science or Engineering,
- Back-end specialist experience building, devising and maintaining user interfaces for software,
- Experienced in back-end Java 8+ development covering all phases from design and build to deploy and run,
- Spring Framework,
- React JS (front-end),
- RabbitMQ or other Message Broker (advantage),
- Kotlin language (advantage),
- SQL (MSSQL advantage),
- Experience in web development and know about integrating with backend systems (advantage),
- Understanding the importance of unit Testing and willing to test,
- A "yes we can" attitude,
- Creative problem solving skills,
- An ability to self-organize

We Offer:

- An inspiring multinational environment in a large IT organization
- Emotional healthy work environment with highly skilled, passionate and joyful colleagues
- A great opportunity of freedom and the real possibility to make a difference in your responsible area
- Cross business career opportunities in the organisation
- Inspiring office and modern company culture that emphasizes a healthy work-life balance
