Remotely (optionally)

No

Expire On

2020-11-30 (17 hours from now)

Description:

An exciting HealthTech startup is looking for a full-time Lead PHP Developer to drive the development of our data-driven tech platform. OME Health collects diverse health data sets (genomics, microbiome, wearables, online assessments) and develops decision engines to deliver evidence-based health coaching programmes to individuals. The company collaborates with a number of high profile corporates – health insurers, retailers, and food manufacturers on a variety of highly innovative personalised nutrition and health propositions.

We have outsourced our development work for a while and we are now looking to bring the development in-house. We will work collaboratively on all of our key projects, so there's plenty of opportunities to make the impact. We are a London based company, but we are starting to create a Vilnius based office to work with our global partners from USA, Japan, Switzerland, Germany and other countries. We can consider a flexible work schedule where some of the work takes place remotely.

In this role you will work closely with the founders and other team members. We expect this role to evolve into a CTO role over the coming 9-18 months.

Required Skills

UNIX

Ubuntu 3-4 years
