Aprašymas:

Our client Exadel is looking for a talented **Lead Business Analyst** who will be the vital link between our information technology capacity and our business objectives by supporting and ensuring the successful completion of analytical, building, testing and deployment tasks of our software product's features.

The Project is a cloud-based platform that uniquely combines a building environment that supports both visual and coding-based forms of development and a variety of back-end services that come with the platform. They help enterprises use this cloud-based platform for mobile apps development and are planning to make more Developer Options available for enterprises.

It is necessary to integrate third party AI/ML services to this cloud-based platform to give a user an ability to use such services easily in their projects.

It should be much easier then to use just AWS or Google. On the other hand they want to give the ability to choose between the services and return the result in unified format. So on the one hand user will have more freedom, on the other hand there won't be a vendor-lock.

For example for Image Recognition the typical flow will be the following:

1. User opens AI tab;
2. Creates a new Image Recognition service;
3. Imports this service to his project;
4. Imports plugin with an example of using the Image Recognition service.

The list of services they want to integrate:

1. Text to speech (Amazon Polly/Google Text-to-Speech/Azure Text to Speech);
2. Speech to text (Amazon Amazon Transcribe/Google Speech-to-Text/Azure Speech to Text);
3. NLP (Amazon Comprehend/Google Cloud Natural Language API/Azure Text Analytics);
4. Translation service (Amazon Translate/Google Cloud Translation API/Azure Translator Text);
5. Image Recognition basic (Amazon Rekognition/Google Cloud Vision API/Computer Vision);
6. Image Recognition advanced (Google AutoML Vision/Azure Custom Vision);
7. Face Recognition (Amazon Rekognition/Azure Face).

After they create this services they will need to develop a sophisticated chatbot app integrating text to speech, speech to text, NLP, translation services.

Their current technology stack:

1. Wildfly 15;
2. Java 11;
3. MongoDB;
4. RedisDB;"

Project Team: Project Manager, Project Owner, Team Lead, Back-end Engineer, Front-end Engineer, 1 QA,1 DevOps.

Your main duties will be to setup and lead business analysis on the project. You will have a great **opportunity** to show your leadership skills, while coaching BA team members.
